

"Cloud computing is moving from a new idea to the next big strategy for optimizing how IT is used"

– Gartner Research

Do Business Anywhere You Go

The Cloudium infrastructure allows you to access your applications from any broadband Internet connection. Whether your application uses a character interface, a thin client or a browser interface, Cloudium can handle it. You can quickly adapt to changes in your IT requirements using a virtualized solution with an easy to use management interface.

Server Migration

Cloudium provides fast and reliable migration of your Linux, Windows or VMware servers by replicating them on our cloud services. You may run any application or development environment on a scalable virtual server that meets your business' current and future needs.

Start Small. Grow Quickly

You can get started with a few virtual machines to test your application and evaluate its advantages. As you see the reduction in capital and operational expenses, Cloudium allows you to add more servers and resources when and where you need them. Application developers can define templates that allow new customers to be operational within minutes. Custom dedicated clouds with segregated resources are available for applications with special requirements.

Managed Cloud

Cloudium monitors your costs and security of your cloud resources. Your staff can concentrate on running your business applications without worrying about cloud infrastructure management.

Amazon AWS

Our partnership with Amazon AWS enables Cloudium to deliver cutting edge and cost effective cloud-based computing solutions to its clients. We can leverage the benefits of AWS as part of our public cloud solutions.

VMware Cloud

Cloudium offers VMware Cloud services, a global leader in virtual infrastructure software for industry-standard systems. The world's largest companies use VMware solutions to simplify their IT, fully leverage their existing computing investments and respond faster to changing business demands.

Fixed monthly pricing

Some cloud service providers expect you to pay for each minute you use their resources or each contact with their support staff. That “utility billing” scheme involves variable monthly costs that are difficult to budget. Cloudium accounts are billed fixed monthly fees according to the resources you contract. Our pricing structure is centered on our customers, not our accountants.

Cloud Backup

To protect data and ensure high availability, businesses need an easy, secure way to backup or replicate data off-site and access it in the event of a disaster. With Cloudium, you can use low cost cloud storage to protect your data off site – all without the cost of building and maintaining a second site. Backing your data into the cloud is more reliable than backing up in physical media, as while a damaged disk means all data is lost, backing up in a cloud ensures that your data is protected and able to be restored as needed.

Disaster Recovery

Virtualizing your in-house infrastructure greatly reduces the risk of costly downtime by enabling the backup and replication of data, so in the event of interruption, your virtualized infrastructure is ready for prompt recovery. Cloudium helps you leverage the cloud for disaster recovery (DR), with replication to meet your Recovery Time Objective (RTO) and Recovery Point Objective (RPO) requirements. Replicating your physical server into the cloud ensures that if the physical one fails, a virtual replication can be quickly activated to take over ensuring minimal downtime.

Partnering Opportunities

Cloudium offers developers assistance for migrating existing installations to the cloud to ensure a successful implementation without a steep learning curve. Our partners can extend their current offerings by offering Cloudium deployment alternatives under attractive terms.

Development and Datacenter Experience

Cloudium offers managed cloud services since 2011. We are a subsidiary of PRW.NET, an Internet Service Provider since 1998. Our experience working with developers allows us to properly support the successful deployment of your applications in the cloud. Our experience with application hosting and datacenters enables us to offer you a reliable, cost effective and well supported infrastructure deployed on certified datacenters. By combining premium low-latency connectivity, high security, redundant power and constant 24/7 monitoring we can offer very competitive service level agreements.
